

Events reach most of our priority firms, but the gap is what happens after.

\$1.2M

spent on 3 events
(NY, London, Berlin)

13 of 17

Tier 1 firms attended at least one event
(47 of 60 firms overall)

\$1.57B

pipeline opened within 90 days of an
attended event (31% of 2026 pipeline);
\$278M committed

39%

of attending firms had a meeting within
30 days (Tier 1: 6 of 21 attendances)

1 Associated, not proven.

About a third of pipeline followed an event, but attendees did not open opportunities faster than comparable non-attendees (NY +12 pts, London -14, Berlin -3; none statistically significant).

2 Follow-up is the controllable gap, worst at Tier 1.

13 of 21 Tier 1 attendances had no meeting in the next 60 days. 10 Tier 1 firms with \$808M of pipeline are on that list.

3 The dinner was the most efficient format.

London (\$185K): \$13K per associated opportunity and the most post-event meetings, vs \$26K NY and \$76K Berlin.

4 Berlin needs a case before renewal.

Our most expensive event (\$610K): meetings with attendees fell (19 → 11) and nothing has committed yet. Recheck at 180 days.

The \$185K dinner produced opportunities at half the cost of NY and a sixth of Berlin

	● NY Summit Conference	● London Dinner Hospitality	● Berlin Forum Conference
Cost	\$420K	\$185K	\$610K
Firms attended (Tier 1)	26 (9)	25 (6)	19 (6)
Follow-up meeting within 30 days	35%	44%	37%
Meetings, 60 days before → after	10 → 21	12 → 31	19 → 11
Opportunities opened within 90 days	16	14	8
Associated pipeline	\$829M	\$423M	\$319M
Committed to date	\$228M	\$50M	\$0M
Cost per associated opportunity	\$26K	\$13K	\$76K
Lift vs non-attendees (diff-in-diff)	+12 pts	-14 pts	-3 pts
Days since event	195	125	99

Cost per associated opportunity (lower is better)

Attending firms met within 30 days

How to read this. "Associated" means the opportunity opened within 90 days of an event the firm attended. That shows what followed each event, not what it caused: we invite firms already likely to invest, and new opportunities peaked for everyone in June and July. The diff-in-diff row compares against firms that did not attend over the same dates.

Committed counts only stages dated on or before 2026-09-23; later-dated stages are treated as projected. Berlin is the youngest event, so its commitments are least mature.

Four decisions for the 2027 calendar

1 Put a 10-day follow-up standard on Tier 1 attendees

Every Tier 1 attendee gets a named owner and a meeting within 10 business days. Start this week with the 10 Tier 1 firms (\$808M pipeline) that attended and have not been met since. Faster follow-up did not by itself raise conversion in 2026 data, so treat this as a standard plus a test.

Owner: coverage leads · Tracked weekly on the dashboard gap list

2 Shift budget toward targeted hospitality

Run a second dinner-format event in 2027 and fund it from the conference line. Hold the Berlin renewal until its 180-day review (mid-December 2026); renew only if associated commitments appear.

Owner: IR events · Decision: December 2026

3 Capture the data that would prove impact

Tag opportunities with a source event at creation, record check-in (not registration), and require firm mapping for every registrant. Today one registrant has no firm and nine firms are only "tentative".

Owner: CRM / BI · Before the next event

4 Design the next events to measure lift

Hold back invitations to a small matched group of firms (same tier, segment, region) and compare 90-day outcomes. One event is too small to prove lift; four to six events with the same design can.

Owner: IR + BI · Pilot on the first 2027 event

What this analysis cannot say: that events caused the pipeline that followed them. With 19 to 26 attending firms per event, differences under about 15 points are within noise. The \$650M commitment of the year came from a firm that attended no event, a reminder that most pipeline is built outside the event calendar.
