

Events reach most of our priority firms but the gap is what happens after

\$1.2M

spent on 3 events
(NY, London, Berlin)

13 of 17

Tier 1 firms attended at least one event
(47 of 60 firms overall)

\$1.55B

pipeline opened within 90 days of an
attended event (31% of 2026 pipeline);
\$253M committed, \$150M declined

39%

of attending firms had a meeting within
30 days (Tier 1: 6 of 21 attendances)

1 Associated, not proven.

About a third of pipeline followed an event, but there is no evidence of incremental lift. Against non-attendees, the change in attendees' new-opportunity rate runs from -14 to +18 pts depending on the event and comparison group, and none is statistically significant*.

2 Follow-up is the controllable gap, worst at Tier 1.

13 of 21 Tier 1 attendances had no meeting in the next 60 days. 10 Tier 1 firms with \$808M of pipeline are on that list.

3 The dinner was the cheapest way to reach firms.

London (\$185K) cost \$7K per attending firm vs \$16K NY and \$32K Berlin, and a similar share of firms opened an opportunity (40% vs 42% and 32%). One dinner is not enough to rank formats.

4 Berlin needs a case before renewal.

Our most expensive event (\$610K): meetings per attending firm fell from 1.0 to 0.6, more than other firms' summer dip, and nothing has committed. Recheck at 180 days.

* Statistical significance: two-sided permutation test (5,000 random reshuffles of which firms attended); significant only if $p < 0.05$. Against firms not at the event $p = 0.61$ (NY), 0.44 (London), 1.00 (Berlin); against the 13 firms at no event $p = 0.84$, 0.79, 0.52.

Analysis cutoff 2026-09-23, the extract date (synthetic assessment data); no opportunity was created after 2026-08-12. Association window: opportunity created 0-90 days after an event the firm confirmed for; most recent event gets credit.

London cost \$7K per attending firm vs \$16K NY and \$32K Berlin; conversion was similar

	● NY Summit Conference	● London Dinner Hospitality	● Berlin Forum Conference
Cost (per attending firm)	\$420K (\$16K)	\$185K (\$7K)	\$610K (\$32K)
Firms attended (Tier 1)	26 (9)	25 (6)	19 (6)
Meetings per attending firm, 60d before → after	0.38 → 0.81	0.48 → 1.24	1.00 → 0.58
Same dates, firms not at the event	0.06 → 0.24	0.43 → 0.54	0.56 → 0.49
Opportunities opened within 90 days	16	13	8
Attending firms that opened one	42%	40%	32%
Associated pipeline (declined)	\$829M (\$150M)	\$398M (\$0M)	\$319M (\$0M)
Committed to date (face value)	\$228M	\$25M	\$0M
Cost per associated opportunity	\$26K	\$14K	\$76K
Diff-in-diff vs firms not at event*	+12 pts (p 0.61)	-14 pts (p 0.44)	-3 pts (p 1.00)
Diff-in-diff vs firms at no event (13)*	-8 pts (p 0.84)	+8 pts (p 0.79)	+18 pts (p 0.52)
Days since event	195	125	99

Spend per associated opportunity

Attending firms met within 30 days

How to read this. "Associated" means the opportunity opened within 90 days of an event the firm attended. That shows what followed each event, not what it caused: we invite firms already likely to invest, and new opportunities peaked for everyone in June and July, inside London's window. The diff-in-diff rows compare attendees with firms not at that event (many went to another) and with firms at no event; the sign flips between them, so neither shows lift.

* Statistical significance: two-sided permutation test (5,000 random reshuffles of which firms attended); significant only if p < 0.05. Against firms not at the event p = 0.61 (NY), 0.44 (London), 1.00 (Berlin); against the 13 firms at no event p = 0.84, 0.79, 0.52.
Committed counts only stages dated on or before 2026-09-23; later stages are projected. London's one commitment is a flagged record (O9998, \$25M); without it London has none.

Four decisions for the 2027 calendar

1 Put a 10-day follow-up standard on Tier 1 attendees

Every Tier 1 attendee gets a named owner and a meeting within 10 business days. Start this week with the 10 Tier 1 firms (\$808M pipeline) not met in the 60 days after an event they attended. Ten days is a standard to test; 2026 data is too small to show whether faster follow-up lifts conversion.

Owner: coverage leads · Tracked weekly on the dashboard gap list

2 Test a second dinner before moving budget

London's low spend per opportunity comes from its low cost per firm, at one event, when new opportunities peaked for everyone. Run a second dinner in 2027 and compare conversion with the conferences before shifting money. Hold Berlin's renewal until its 180-day review (December 2026).

Owner: IR events · Decision: December 2026

3 Capture the data that would prove impact

Tag opportunities with a source event at creation, record check-in (not registration), and require firm mapping for every registrant. Today one registrant has no firm and nine firm registrations are only "tentative".

Owner: CRM / BI · Before the next event

4 Build a comparison into the next events

Vary follow-up at random among attendees (senior owner or not, 5 vs 15 days) and track invited-but-declined firms as a comparison group, rather than withholding invitations from priority investors. With 60 firms, results stay directional.

Owner: IR + BI · Pilot on the first 2027 event

What this analysis cannot say: that events caused the pipeline that followed them. With 19 to 26 attending firms per event, none of the gaps is statistically significant*, and their sign changes with the comparison group. The \$650M commitment of the year came from a firm that attended no event, a reminder that most pipeline is built outside the event calendar.

* Statistical significance: two-sided permutation test (5,000 random reshuffles of which firms attended); significant only if $p < 0.05$. Against firms not at the event $p = 0.61$ (NY), 0.44 (London), 1.00 (Berlin); against the 13 firms at no event $p = 0.84, 0.79, 0.52$.
